## Qualifications

- TS/SCI Clearance + Full Scope Polygraph** Summer 2021 - Present  
*with Agency special background investigation.*
- PhD, Mathematics**, Dartmouth College, Hanover, NH Fall 2018 - Spring 2023  
Advisor: John Voight  
Thesis: *Counting elliptic curves with a cyclic  $m$ -isogeny over  $\mathbb{Q}$*
- MA, Mathematics**, Dartmouth College, Hanover, NH Fall 2018 - Winter 2020  
Advisor: John Voight
- MS, Mathematics**, Brigham Young University, Provo, UT Winter 2017 - Summer 2018  
Advisors: Michael Griffin and Paul Jenkins  
Thesis: *The arithmetic of modular grids*
- BS, Mathematics**, Brigham Young University, Provo, UT Fall 2013 - Fall 2016

## Professional Experience

- AI/ML Engineering Manager at ARKA** Winter 2025 - Present  
*My responsibilities are threefold: I innovate in AI and algorithms as an engineer, serve as line manager for both junior and senior AI/ML developers, and act as my company's Algorithm Team Lead. As an engineer, I do cutting edge work on LLMs, with networks, in ELINT, and more. I also cowrite program proposals. As a line manager, I nurture a personal rapport with my people, advocate for their interests, and facilitate their work on projects that engage them and enable them to grow in the ways they wish. I am also on the front lines of company recruitment. As Algorithm Team Lead, I liaise with project leads to provide technical support and connect them with the best employees for their problems, organize and deliver presentations on both foundational and advanced algorithm topics, and serve as our company's algorithms SME.*
- Principal AI/ML Engineer at ARKA** Summer 2023 - Winter 2025  
*I spearheaded the development of advanced AI solutions across multiple projects, innovating in areas such as cognitive agents, signal segmentation systems, and satellite scheduling algorithms. I conducted novel research within an Agile framework and served as Scrum Master and AI/Algorithms Lead on one project. I delivered dozens of presentations to company leadership and peers on myriad computational and mathematical topics, from automata to quantum computing.*
- CCR-Princeton SCAMP Summer Associate** Summer 2022  
*I produced research in the discipline of advanced cryptography. My work included design and vulnerability analysis of novel cryptographic protocols, as well as practical and theoretical work on implementations of homomorphic encryption and secure multi-party computation.*
- NSA Graduate Mathematics Program Intern** Summer 2021  
*I produced research focused on distinguishing between human and synthetic audio, using techniques from machine learning, probability theory, and topological data analysis.*

## Academic Researcher at BYU and Dartmouth

Fall 2013 - Spring 2023

*At BYU, I proved results about modular forms and algorithms on graphs. At Dartmouth, I instigated successful research into summing divergent series, the Prisoner's Dilemma, and the Ramanujan-Robin criterion. My thesis develops the arithmetic statistics of elliptic curves with cyclic  $m$ -isogeny. See Research Publications and Research Preprints below.*

## Math Instructor at BYU and Dartmouth

Winter 2017 - Spring 2023

*I taught 30-student calculus courses in three different styles: lecturing, virtually with a “flipped classroom”, and with handouts and group exercises. I TAed for lower-division courses, and by special request for upper-division courses as well. See Teaching Experience below.*

## Computer Skills

### Fluent in...

Bash • Git •  $\text{\LaTeX}$  • Python • SageMath • YAML

### Fair at...

C++ • Go • HTML • Java • Magma • Mathematica • MatLab • R

### Familiar with...

gRPC • MongoDB • PARI/GP • Rust • SQL

## Books

**Puzzle and Proof: A Decade of Problems from the Utah Math Olympiad**, with Samuel Dittmer, Hiram Golze, and Caleb Stanford

AK Peters/CRC Recreational Mathematics Series.

This book is a collection of 70 mathematical problems and puzzles from the first ten years of the Utah Math Olympiad (UMO), 2013–2022. These problems are distinguished in two respects. First, they aim to be *understandable* to an advanced high school audience, even if solving them can sometimes be quite difficult. Second, all of the problems ask for not only an answer, but a *proof*.

## Research Publications

**A database of basic numerical invariants of Hilbert modular surfaces**, with Eran Assaf, Angelica Babei, Ben Breen, Edgar Costa, Juanita Duque-Rosero, Aleksander Horawa, Jean Kieffer, Avinash Kulkarni, Sam Schiavone, and John Voight

Contemp. Math., vol. 796, 2024, Amer. Math. Soc., Providence, RI, 285–312. arXiv: 2301.10302

We describe algorithms for computing geometric invariants for Hilbert modular surfaces, and we report on their implementation.

**Counting elliptic curves over the rationals with a 7-isogeny**, with John Voight

Research in Number Theory **9**, 75 (2023). arXiv: 2212.11354

We count by height the number of elliptic curves over the rationals, both up to isomorphism over the rationals and over an algebraic closure thereof, that admit a cyclic isogeny of degree 7.

**Reactive means in the Iterated Prisoner's Dilemma**, with *Caroline Hammond and Feng Fu*  
Applied Mathematics and Computation **458** 128201 (2023). arXiv: 2302.13909

The Iterated Prisoner's Dilemma (IPD) is a well studied framework for understanding direct reciprocity and cooperation in pairwise encounters. However, measuring the morality of various IPD strategies is still largely lacking. Here, we partially address this issue by proposing a suit of plausible morality metrics to quantify four aspects of justice. We focus our closed-form calculation on the class of reactive strategies because of their mathematical tractability and expressive power. We define reactive means as a tool for studying how actors in the IPD and Iterated Snowdrift Game (ISG) behave under typical circumstances. We compute reactive means for four functions intended to capture human intuitions about "goodness" and "fair play". Two of these functions are strongly anticorrelated with success in the IPD and ISG, and the other two are weakly anticorrelated with success. Our results will aid in evaluating and comparing powerful IPD strategies based on machine learning algorithms, using simple and intuitive morality metrics.

**8 internal NSA papers**, with *IDA Research Team*

Summer 2022.

Abstracts redacted.

**8 internal IDA blog posts**

Summer 2022.

Abstracts redacted.

**Generating and detecting synthetic speech: a technical report**, with *NSA Research Team*  
Internal NSA Paper (Summer 2021).

We present methods for distinguishing between human and synthesized audio, assess their efficacy, and suggest directions for future development. We also present methods for generating realistic-sounding synthetic speech that mimics a human voice, and for confusing machine learning systems such as speaker ID and detection algorithms into believing the generated synthetic speech is real.

**The arithmetic of modular grids**, with *Michael Griffin and Paul Jenkins*

Mathematika **68**, 1080-1119 (2022). arXiv: 2012.14403

A modular grid is a pair of sequences  $(f_m)_m$  and  $(g_n)_n$  of weakly holomorphic modular forms such that for almost all  $m$  and  $n$ , the coefficient of  $q^n$  in  $f_m$  is the negative of the coefficient of  $q^m$  in  $g_n$ . Zagier proved this coefficient duality in weights  $1/2$  and  $3/2$  in the Kohnen plus space, and such grids have appeared for Poincaré series, for modular forms of integral weight, and in many other situations. We give a general proof of coefficient duality for canonical row-reduced bases of spaces of weakly holomorphic modular forms of integral or half-integral weight for every group  $\Gamma \subseteq \mathrm{SL}_2(\mathbb{R})$  commensurable with  $\mathrm{SL}_2(\mathbb{Z})$ . We construct bivariate generating functions that encode these modular forms, and study linear operations on the resulting modular grids.

**Odd, spoof perfect factorizations**, with *Nickolas Andersen, Spencer Durham, Michael Griffin, Jonathon Hales, Paul Jenkins, Ryan Keck, Hankun Ko, Eric Moss, Pace Nielsen, Kyle Niendorf, Vandy Tombs, Merrill Warnick, and Dongsheng Wu*

Journal of Number Theory **234**, 31-47 (2022). Quanta article. Veritasium video. arXiv: 2006.10697

We investigate the integer solutions of Diophantine equations related to perfect numbers. These solutions generalize the example, found by Descartes in 1638, of an odd, "spoof" perfect factorization  $3^2 \cdot 7^2 \cdot 11^2 \cdot 22021^1$ . More recently, Voight found the spoof perfect factorization  $3^4 \cdot 7^2 \cdot 11^2 \cdot 19^2 \cdot (-127)^1$ . No other examples appear in the literature. We compute all nontrivial, odd, primitive spoof perfect factorizations with fewer than seven bases – there are twenty-one in total. We show that the structure of odd, spoof perfect factorizations is extremely rich, and there are multiple infinite families of them. This implies that certain approaches to the odd perfect number problem that use only the multiplicative nature of the sum-of-divisors function are unworkable. On the other hand, we prove that there are only finitely many nontrivial, odd, primitive spoof perfect factorizations with a fixed number of bases.

**Zagier duality for level  $p$  weakly holomorphic modular forms**, with *Paul Jenkins*

The Ramanujan Journal **50**, 93–109 (2019). arXiv: 1709.10023

We prove Zagier duality between the Fourier coefficients of canonical bases for spaces of weakly holomorphic modular forms of prime level  $p$  with  $11 \leq p \leq 37$  with poles only at the cusp at  $\infty$ , and special cases of duality for an infinite class of prime levels. We derive generating functions for the bases for genus 1 levels.

## **Graphs with the strong Havel-Hakimi property, with Michael Barrus**

Graphs and Combinatorics **32**, 1689–1697 (2016). arXiv: 1505.00085

The Havel–Hakimi algorithm iteratively reduces the degree sequence of a graph to a list of zeroes. As shown by Favaron, Mahéo, and Saclé, the number of zeroes produced, known as the residue, is a lower bound on the independence number of the graph. We say that a graph has the strong Havel–Hakimi property if in each of its induced subgraphs, deleting any vertex of maximum degree reduces the degree sequence in the same way that the Havel–Hakimi algorithm does. We characterize graphs having this property (which include all threshold and matrogenic graphs) in terms of minimal forbidden induced subgraphs. We further show that for these graphs the residue equals the independence number, and a natural greedy algorithm always produces a maximum independent set.

## Research Preprints

### **Positive spoof Lehmer factorizations, with Guntas Singh**

Preprint. arXiv: 2409.17076

We investigate the integer solutions of Diophantine equations related to Lehmer’s totient conjecture. We give an algorithm that computes all nontrivial positive spoof Lehmer factorizations with a fixed number of bases  $r$ , and enumerate all nontrivial positive spoof Lehmer factorizations with 6 or fewer factors.

### **Multiplicative summations into algebraically closed fields, with Robert Dawson**

Preprint. arXiv: 2111.09938

In this paper, extending our earlier program, we derive maximal canonical extensions for multiplicative summations into algebraically closed fields. We show that there is a well-defined analogue to minimal polynomials for a series algebraic over a ring of series, the “scalar polynomial”. When that ring is the domain of a summation  $\mathfrak{S}$ , we derive the related concepts of the  $\mathfrak{S}$ -minimal polynomial for a series, which is mapped by  $\mathfrak{S}$  to a scalar polynomial. When the scalar polynomial for a series has the form  $(t - a)^n$ ,  $a$  is the unique value to which the series can be mapped by an extension of the original summation.

### **Telescopic, multiplicative, and rational extensions of summations, with Robert Dawson**

Preprint. arXiv: 2105.04592

A summation is a shift-invariant  $\mathbb{R}$ -module homomorphism from a submodule of  $\mathbb{R}$  to  $\mathbb{R}$  or another ring. Dawson formalized a method for extending a summation to a larger domain by telescoping. In this paper, we revisit telescoping, we study multiplicative closures of summations (such as the usual summation on convergent series) that are not themselves multiplicatively closed, and we study rational extensions as a generalization of telescoping.

## Expository Notes

### **Minimalist practical numbers**

Unpublished.

A natural number  $n$  is practical if every smaller number can be written as a sum of distinct divisors of  $n$ . We say that a practical number  $n$  is minimalist if this representation is unique. In this note, we prove that a practical number is minimalist if and only if it is a power of 2.

### **Fast-growing series are transcendental, with Robert Dawson**

Unpublished. arXiv: 2102.12995

Let  $R$  be a subring of  $\mathbb{C}[[z]]$ , and let  $X \in \mathbb{C}[[z]]$ . The Newton-Puiseux Theorem implies that if the coefficients of  $X$  grow sufficiently rapidly relative to the coefficients of the series in  $R$ , then  $X$  is transcendental over  $R$ . We provide an alternative proof of this result by establishing a relationship between the coefficients of  $A(X)$  and  $A'(X)$ , where  $A(T)$  is a polynomial over  $\mathbb{C}[[z]]$ .

## Awards and Fellowships

<i>Next-Generation Cryptography</i>	November 14-18, 2022
Center for Communications Research, La Jolla	
<i>Modular Curves Workshop 2</i>	November 5-9, 2022
MIT, Boston	
<i>Big Data Conference 2022</i>	August 26, 2022
Virtual (Harvard University, Cambridge)	
<i>Graph Fest 2022</i>	June 29-30, 2022
NSA Internal Conference	
<i>Explicit Methods for Modularity</i>	April 11-15, 2022
Virtual (Simons Collaboration)	
<i>Arizona Winter School 2022: Automorphic Forms Beyond <math>GL_2</math></i>	March 5-9, 2022
Virtual (University of Arizona, Tucson)	
<i>Hilbert Modular Forms Infrastructure Week 2</i>	February 21-25, 2022
Dartmouth College, Hanover	
2021 <i>Maine-Québec Number Theory Conference</i>	October 2-3, 2021
Virtual (University of Maine, Orono)	
<i>MathFest 2021</i>	June 4, 2021
NSA Internal Conference	
<i>Spring 2021 Algebraic Geometry Northeastern Series</i>	May 4-5, 2021
Virtual (Brown University, Providence)	
21 <sup>st</sup> <i>Algebra, Geometry and Combinatorics Day</i>	April 10, 2021
Virtual (University of Notre Dame, Notre Dame)	
2021 <i>Joint Mathematics Meetings</i>	January 6-9, 2021
Virtual (American Math Society, Mathematical Association of America)	
<i>Fall 2020 Algebraic Geometry Northeastern Series</i>	October 23-25, 2020
Virtual (Stony Brook University, Stony Brook)	

2020 <i>Conférence de Théorie des Nombres Québec-Maine</i> Virtual (Université Laval, Québec)	September 26-27, 2020
14 <sup>th</sup> <i>Algorithmic Number Theory Symposium</i> Virtual (University of Auckland, Auckland)	June 29 - July 4, 2020
<i>UNCG Summer School in Computational Number Theory and Algebra:</i> <i>Ergodic Theory with Applications to Continued Fractions</i> Virtual (University of North Carolina, Greensboro)	May 18-22, 2020
2019 <i>Maine-Québec Number Theory Conference</i> University of Maine, Orono	October 5-6, 2019
<i>Fall 2019 Algebraic Geometry Northeastern Series</i> Boston College, Boston	September 20-22, 2019
33 <sup>rd</sup> <i>Automorphic Forms Workshop</i> Duquesne University, Pittsburgh	March 6-10, 2019
<i>Building Bridges: 4<sup>th</sup> EU/US Summer School +</i> <i>Workshop on Automorphic Forms and Related Topics</i> Alfréd Rényi Institute of Mathematics, Budapest	July 9-20, 2018
32 <sup>nd</sup> <i>Automorphic Forms Workshop</i> Tufts University, Medford	March 19-22, 2018
<i>Modular Forms are Everywhere</i> Max Planck Institute for Mathematics, Bonn	May 15-26, 2017
31 <sup>st</sup> <i>Automorphic Forms Workshop</i> East Tennessee State University, Johnson City	March 6-9, 2017
2017 <i>BYU Student Research Conference</i> Brigham Young University, Provo	March 4, 2017
2016 <i>Connecticut Summer School in Number Theory</i> University of Connecticut, Storrs	August 8-14, 2016
2015 <i>BYU Student Research Conference</i> Brigham Young University, Provo	March 21, 2015
2014 <i>BYU Student Research Conference</i> Brigham Young University, Provo	March 15, 2014
